

Today 5:33 PM

i want to make a logo based on this design.

Edit

Edit

Yes — I think **Practice** is pointing toward something important about the philosophy, not merely giving us a better suffix.

"Method" implies *follow these steps*. "Framework" implies *here are the structures*.

"Project management" implies *control the project*. But what you're describing is closer to a **way of engaging with work over time**: observe, try something, learn, adjust, continue.

That makes me want to explore words with slightly different flavors:

Name

Feeling

Throughline Practice

Ongoing, learned through doing, never really finished

Name	Feeling
Throughline Flow	Continuous, organic, movement without artificial boundaries
Throughline Inquiry	Curious, scientific, discovery-oriented
Throughline Experiment	Bold, provisional, explicitly embraces uncertainty
Throughline Learning	PDSA/Deming connection; work as continuous learning
Throughline Discovery	Exploratory, but sounds more like just the early part
Throughline Thinking	A mental model rather than a process
Throughline Way	Philosophical, informal, perhaps slightly precious
Throughline Cycle	Captures iteration but fights the linear metaphor
Throughline Progress	Forward movement, but more outcome-oriented
Throughline Work	Wonderfully plain: simply a different way of organizing work
Throughline Studio	Experimental/creative, but sounds like an organization/product
Throughline Lab	Experimental/scientific, but sounds like a company
Throughline Praxis	Theory + practice + reflection; conceptually very good, linguistically maybe too academic

I keep coming back to Throughline Practice

It gets more interesting the more we unpack it.

A *project* supposedly has a beginning and an end. But real software/product work usually doesn't. We observe something, change it, see what happens, discover something else, change direction, maintain it, improve it...

So perhaps Throughline shouldn't even describe itself as a project-management

alternative.

Throughline is a practice for continuously organizing, exploring, and progressing work.

That immediately moves it into a different intellectual neighborhood.

And *practice* has another useful implication: **you get better at it by doing it**. Medicine is a practice. Science is a practice. Design is a practice. Software development is a practice. You don't "complete" the practice.

"Inquiry" is the sleeper candidate

Throughline Inquiry has something I really like because it changes the fundamental unit from *task completion* toward *learning*.

The PDSA influence becomes obvious:

We're not executing a predetermined project plan. We're continuously answering:

What do we know?

What do we need to learn?

What should we try next?

What happened?

What does that change?

And each answer changes the line ahead.

That's *very* close to the philosophy you've been describing.

I wouldn't necessarily call the whole thing **Throughline Inquiry**, though. Instead, **inquiry could become one of the fundamental concepts within Throughline Practice.**

Practice + Flow + Inquiry may actually be the vocabulary

Rather than choosing among them, they could describe different aspects:

Throughline Practice — the overall philosophy.

The Line — the ordered continuity of work through time.

Flow — movement along the line.

The Window — our current field of attention.

Inquiry — the learning process that determines what comes next.

Cycles — repeated experiments/learning loops, unrolled onto the line.

Now — the constantly moving boundary between observation and intention.

That starts to give this something more interesting than a project-management methodology.

And it suggests a concise philosophical statement:

Throughline is a practice of continuous inquiry and forward flow.

Or perhaps:

Throughline is the practice of moving work forward through continuous inquiry.

And there's a wonderful tension with the logo now. The **curve** is inquiry—experiment, observe, learn, adjust. The **arrow** is flow. Neither dominates the other.

Learn in cycles. Move in a line.

That last phrase might be worth keeping. It captures almost the entire idea in six words.

Official Tagline for the website: "Learn in cycles. Move in a line."

Locked in as the official Throughline website tagline:

Learn in cycles. Move in a line.

what about "tlflow.cc" for the website ?

tlflow.cc is pretty good.

It reads naturally as **Throughline Flow**, and "flow" fits the philosophy much better than "project management." The .cc also feels appropriately like a software/open-practice/community project rather than a corporate PM product.

The only mild weakness is that someone encountering `tlflow.cc` could probably won't decode **TL = Throughline**. But that's not much of a problem if the site immediately presents:

THROUGHLINE

Learn in cycles. Move in a line.

I actually like having **Flow** in the domain without necessarily making "Throughline Flow" the formal name. It reinforces one of the ideas while leaving the name simply **Throughline**.

So I'd frame it as:

Name: Throughline

Domain: `tlflow.cc`

Tagline: *Learn in cycles. Move in a line.*

Description: A practice of continuous inquiry and forward flow.

And visually, `tlflow.cc` is short, memorable, and looks good in a footer/logo lockup.

I'd put it **well ahead of** `tlpm.*`.
